# OUR DATA

Records of 32  
NFL teams  
from  
2002-2022

# CLEANING

- Aggregated two datasets
  - Offense/Defense Stats
  - Win Percentages
- Standardization
- Dropping categorical columns

# ALGORITHMS

01

## K NEAREST NEIGHBORS

classifies data points based on the majority class among their k nearest neighbors

03

## LINEAR REGRESSION

modeling relationships between quantitative variables

02

## RANDOM FOREST

uses multiple decision trees to enhance predictive accuracy and mitigate overfitting

04

## CLUSTERING

segregates datasets into distinct clusters by iteratively assigning data points to the closest cluster centroid

# RESEARCH QUESTIONS

01

Can we predict the win percentage for each team for a particular season?

02

Can we predict whether or not a team will have a winning record given their statistics?

03

Can we predict a team's net point gains a season, given their statistics for that season?

04

Can we group teams by their playing style, such as defensive or offensive, over the 20 year span?

30

40

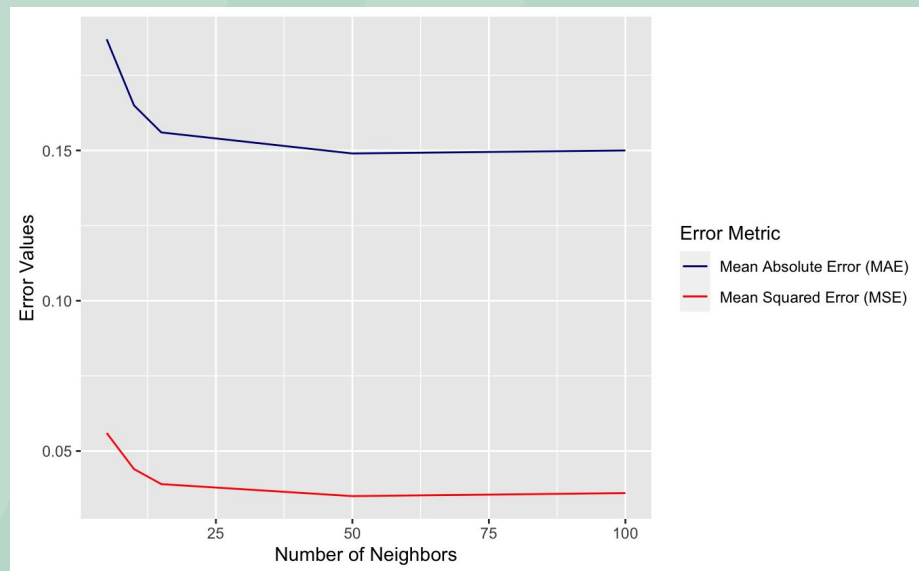

50

40

30

# Can we predict the win percentage for each team for a particular season?

- K-Nearest Neighbors
- 50 nearest neighbors for defense
- 100 nearest neighbors for offensive
- Mean Absolute Error: 0.149 Defensive & Offensive

30

40

50

40

30

# Can we predict whether or not a team will have a winning record given their statistics?

- Winning Record (1) or Losing Record (0)
- 10 attributes, 32 data points, 10 decision trees
- Accuracy: 68.5%
- Precision: 53.6%
- Recall: 80.7%

	<b>Predicted Losing Record</b>	<b>Predicted Winning Record</b>
<b>Actual Losing Record</b>	297	71
<b>Actual Winning Record</b>	141	163

30

40

50

40

30

# Can we predict a team's net point gains a season, given their statistics for that season?

- Linear Regression
- Combines Offensive and Defensive Statistics
- Points gained - points opponents gained
- Measured in R squared

$R^2:$   
0.94

30

40

50

40

30

# Can we group teams by their playing style, such as defensive or offensive, over the 20 year span?

- K-Means Clustering
- 10 clusters
- Standardized data
- Third cluster: “Worst” teams
- Fourth cluster: “Best” teams
- Best teams are strong on offense and defensive; worst teams are bad on offense and defensive

# RESULTS

## WIN PERCENTAGE

Moderate Accuracy

## WINNING RECORD

Reasonable level of precision

## NET POINT GAMES

Captured variance

## DEFENSIVE/OFFENSIVE

Revealed distinct groupings

30

40

50

40

30

# CONCLUSIONS

- Statistical and Machine Learning techniques
- Power of data-driven approaches in sports analytics
